The global rise of the far right has been a major political trend in recent years. In Europe, the United States, and elsewhere, far-right parties have made significant gains in elections, and their ideas have become increasingly mainstream. This has raised concerns about the future of democracy and human rights around the world.

There are many factors that have contributed to the rise of the far right, including economic inequality, social unrest, and the rise of populism and nationalism. However, one factor that has been largely overlooked is the role of agrarian change and peasant unrest.

Agrarian change is the process of transformation in the agricultural sector, which includes changes in land ownership, land use, and farming practices. These changes have had a profound impact on rural communities around the world, and they have often led to peasant unrest.

Peasant unrest is a form of social unrest that is caused by the grievances of peasants, or small-scale farmers. These grievances can include poverty, landlessness, and exploitation. Peasant unrest has a long history, and it has often been a major factor in social and political change.

In recent years, agrarian change and peasant unrest have been linked to the rise of the far right in many countries. In Europe, for example, the far-right party Alternative for Germany (AfD) has made significant gains in rural areas, where there has been a decline in agriculture and an increase in unemployment. In the United States, the far-right president Donald Trump has received strong support from rural voters, many of whom are struggling with the effects of globalization and economic change.

The link between agrarian change and the rise of the far right is complex, but it is clear that these two factors are closely related. Agrarian change has led to peasant unrest, which has in turn created a fertile ground for the growth of far-right movements. These movements have capitalized on the grievances of peasants and have offered them simple solutions to their problems.

The rise of the far right is a serious threat to democracy and human rights around the world. It is important to understand the factors that have contributed to this rise, including agrarian change and peasant unrest. By

addressing the grievances of peasants, we can help to prevent the far right from gaining further ground.

## **The Causes of Agrarian Change**

There are many factors that can lead to agrarian change, including:

- **Economic development:** As countries develop, they often shift from agriculture to industry and services. This can lead to a decline in the number of people working in agriculture, and a decrease in the amount of land that is used for farming.
- **Technological change:** New technologies can lead to changes in farming practices, which can in turn lead to agrarian change. For example, the use of new machinery can lead to a decrease in the number of farm workers, and the use of new fertilizers and pesticides can lead to an increase in crop yields.
- **Government policies:** Government policies can also lead to agrarian change. For example, government policies that promote the consolidation of land into larger farms can lead to a decrease in the number of small-scale farmers, and government policies that subsidize certain crops can lead to an increase in the production of those crops.

## **The Impact of Agrarian Change on Peasants**

Agrarian change can have a significant impact on peasants. These impacts can include:

- **Loss of land:** Agrarian change can lead to the loss of land for peasants. This can happen when land is consolidated into larger

farms, or when land is converted to other uses, such as urban development.

- **Loss of income:** Agrarian change can lead to a loss of income for peasants. This can happen when peasants are forced to sell their land or when they are no longer able to find work in agriculture.
- **Increased vulnerability:** Agrarian change can make peasants more vulnerable to poverty and exploitation. This is because peasants who have lost their land or their income are often forced to work in low-paid and insecure jobs.

## **The Link Between Agrarian Change and Peasant Unrest**

Agrarian change can lead to peasant unrest when peasants feel that they are being unfairly treated or when they are unable to meet their basic needs. Peasant unrest can take many forms, including:

- **Protest:** Peasants may protest against government policies that they believe are unfair or harmful. These protests can take the form of marches, demonstrations, and strikes.
- **Violence:** In some cases, peasants may resort to violence in order to protect their rights or to improve their living conditions. This violence can take the form of riots, looting, and arson.
- **Migration:** Peasants may also migrate to other areas in search of better opportunities. This migration can be a major challenge for peasants, as they often lack the resources and skills needed to succeed in a new environment.

## **The Role of Agrarian Change and Peasant Unrest in the Rise of the Far Right**

Agrarian change and peasant unrest have played a significant role in the rise of the far right in many countries. This is because far-right movements have been able to capitalize on the grievances of peasants and offer them simple solutions to their problems.

Far-right movements often appeal to peasants by promising to protect their land and their way of life. They also promise to restore traditional values and to reduce the influence of globalism and multiculturalism. These messages have resonated with many peasants who feel that they have been left behind by the forces of globalization and economic change.

The far right has also been able to gain support from peasants by using fear and scapegoating. They often blame immigrants, minorities, and other outsiders for the problems facing peasants. This rhetoric has led to an increase in racism and xenophobia in many countries.

The rise of the far right is a serious threat to democracy and human rights around the world. It is important to understand the factors that have contributed to this rise, including agrarian change and peasant unrest. By addressing the grievances of peasants, we can help to prevent the far right from gaining further ground.
